Job Description Details:

The Environmental & Chemistry (E&C) Supervisor is responsible for maintaining the plant primary, secondary, and radiochemistry programs, counting room, plant effluents, chemical control, and ensuring compliance with various requirements such as technical specifications, ODCM, and NPDES permit. The E&C Supervisor is also responsible for the sub-unit budget, coordination of training and qualification of technicians, coordination of projects, and direct supervision of technicians. Additionally, the position supports outage activities and emergency preparedness functions for the site. This position reports to the Environmental & Chemistry Superintendent.

Requirements for the position include:

- Bachelors degree in Chemistry or a related science is preferred.
- Minimum of four years of experience in power plant chemistry and radiochemistry;
- Working knowledge of applicable federal and state regulations in the environmental and chemistry area and industry guidelines;
- Excellent written and verbal communication skills;
- Demonstrated leadership ability and mature judgement.
- Demonstrated leadership in Human Performance and Industrial Safety.
- Successful completion of the Progress Energy Supervisory Development Program is desired.
- Supervisory and/or project management experience is desired. Selected candidate must be able to qualify, and maintain requirements for the Emergency Response Organization and must live within emergency response-time requirements.
- Candidate must also earn and maintain unescorted plant access
